INDEX TO AUTHORS

A

Allen, David W., Guthe, Karl F., and **Wyman, Jeffries, Jr.** Further studies on the oxygen equilibrium of hemoglobin, 393

Anker, H. S. On the utilization of L- and D-alanine for the acetylation reaction *in vivo*, 167

Armistead, Eleanor B. See *Weissman, Schoenbach, and Armistead*, 153

Artom, Camillo. See *Swanson and Artom*, 281

Astwood, E. B. See *Payne, Raben, and Astwood*, 719

Awapara, Jorge, Landua, Alton J., Fuerst, Robert, and **Seale, Billie.** Free γ-aminobutyric acid in brain, 35

—. See *Wingo and Awapara*, 267

Axelrod, A. E., and **Hofmann, Klaus.** The inactivation of biotin by hydrochloric acid, 23

—. See *Hofmann and Axelrod*, 29

B

Banes, Daniel, Carol, Jonas, and **Haenni, Edward O.** The resolution of isoequilin A and the identification of Compound 3, 557

Bartlett, Paul D., and **Glynn, Marjorie.** Studies on the mechanism of nitrogen storage. IV. Muscle transaminase, free amino acids, and glutamine in normal and induced states of growth, 253

— and —. V. Hepatic and renal transaminase in normal and induced states of growth, 261

Bennett, Mary Adelia. Utilization of homocystine for growth in presence of vitamin B_{12} and folic acid, 751

Bergman, Vera. See *Mazur, Litt, and Shorr*, 485, 497

Berlin, Nathaniel I. The distribution of cobalt in polycythemic rats, 41

Best, B. See *Sinsheimer, Scott, and Loofbourow*, 299, 313

Blanchard, Marian L., Korkes, Seymour, del Campillo, Alice, and **Ochoa, Severo.** Function of biotin in the metabolism of *Lactobacillus arabinosus*, 875

Borek, Ernest. See *Grossowicz, Wainfan, Borek, and Waelsch*, 111

Borsook, Henry, Deasy, Clara L., Haagen-Smit, A. J., Keighley, Geoffrey, and **Lowy, Peter H.** Metabolism of C^{14}-labeled glycine, L-histidine, L-leucine, and L-lysine, 839

Brady, Roscoe O., and **Gurin, Samuel.** Biosynthesis of labeled fatty acids and cholesterol in experimental diabetes, 589

Brawerman, George. See *Zamenhof and Chargaff*, 1

Brodie, Bernard B. See *Novack and Brodie*, 787

Brown, Douglas M. See *Smith, Brown, Ghosh, and Sayers*, 631

C

Calkins, Evan. See *Lerner, Fitzpatrick, Calkins, and Summerson*, 793

Camien, Merrill N., and **Dunn, Max S.** Antagonisms in the utilization of D-amino acids by lactic acid bacteria. III. Influence of DL-methionine sulfone and oxidized casein on the utilization of D-methionine, 365

Cammarata, P. S., and **Cohen, Philip P.** The scope of the transamination reaction in animal tissues, 439

del Campillo, Alice. See *Blanchard, Korkes, del Campillo, and Ochoa*, 875

—. See *Korkes, del Campillo, and Ochoa*, 891

Carol, Jonas. See *Banes, Carol, and Haenni*, 557

Chaikoff, I. L. See *Feller, Strisower, and Chaikoff*, 571

—. See *Weinman, Chaikoff, Entenman, and Dauben*, 643

Chantrenne, Hubert, and **Lipmann, Fritz.** Coenzyme A dependence and

XUM

acetyl donor function of the pyruvate-formate exchange system, 757
Chargaff, Erwin. See *Zamenhof and Chargaff*, 1
Cohen, Philip P. See *Cammarata and Cohen*, 439
Coon, Minor J. The metabolic fate of the isopropyl group of leucine, 71
Coulson, E. J., and **Stevens, Henry.** The serological relationship of bovine whey albumin to serum albumin, 355
Custer, J. H. See *Polis, Shmukler, and Custer*, 349

D

Dauben, W. G. See *Weinman, Chaikoff, Entenman, and Dauben*, 643
Day, Paul L. See *Kelley, Totter, and Day*, 529
Deasy, Clara L. See *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 839
Dunn, Floyd W., and **Smith, Emil L.** Action of carboxypeptidase on derivatives of unnatural amino acids, 385
Dunn, Max S. See *Camien and Dunn*, 365

E

Eades, Charles H., Jr. Amino acid derivatives in bacterial metabolism. I. Derivatives of leucine, phenylalanine, tryptophan, and valine, 147
Eckstein, H. C. See *Tyner, Lewis, and Eckstein*, 651
Elion, Gertrude B., and **Hitchings, George H.** Antagonists of nucleic acid derivatives. IV. Reversal studies with 2-aminopurine and 2,6-diaminopurine, 511
Elvehjem, C. A. See *Hankes, Lyman, and Elvehjem*, 547
—. See *Litwack, Williams, Feigelson, and Elvehjem*, 605
—. See *Williams, Feigelson, and Elvehjem*, 597
Englard, Sasha, and **Singer, Thomas P.** Physicochemical studies on β-amylase, 213
Entenman, C. See *Weinman, Chaikoff, Entenman, and Dauben*, 643
Evans, John D. Pyruvate metabolism of normal rabbit bone marrow *in vitro*, 273

F

Feigelson, Philip. See *Litwack, Williams, Feigelson, and Elvehjem*, 605
—. See *Williams, Feigelson, and Elvehjem*, 597
Feldman, Louis I., and **Gunsalus, I. C.** The occurrence of a wide variety of transaminases in bacteria, 821
Feller, D. D., Strisower, E. H., and **Chaikoff, I. L.** Turnover and oxidation of body glucose in normal and alloxan-diabetic rats, 571
Ferrebee, J. W. See *Severinghaus and Ferrebee*, 621
Fitzpatrick, Thomas B. See *Lerner, Fitzpatrick, Calkins, and Summerson*, 793
Frankel, Sam. See *Roberts and Frankel*, 55
Fraser, Dean, and **Powell, Richard E.** The kinetics of trypsin digestion, 803
French, Dexter, and **Knapp, Doris W.** The maltase of *Clostridium acetobutylicum*. Its specificity range and mode of action, 463
Fruton, Joseph S. See *Johnston, Mycek, and Fruton*, 205
—. See *Taylor, Simmonds, and Fruton*, 613
Fuerst, Robert. See *Awapara, Landua, Fuerst, and Seale*, 35

G

Gerke, Carolyn. See *Schroeder, Kay, and Wells*, 221
Ghosh, B. N. See *Smith, Brown, Ghosh, and Sayers*, 631
Giese, Arthur C. See *McLean and Giese*, 537, 543
Gillette, James R., and **Kalnitsky, George.** Fluoroacetate inhibition of fatty acid oxidation by liver preparations. A mechanism of action, 679

Glynn, Marjorie. See *Bartlett and Glynn*, 253, 261
Goldblith, Samuel A., and **Proctor, Bernard E.** Photometric determination of catalase activity, 705
Goldstein, Franz. The colorimetric determination of thiocyanate in whole blood, 523
Grossowicz, Nathan, Wainfan, Elsie, Borek, Ernest, and **Waelsch, Heinrich.** The enzymatic formation of hydroxamic acids from glutamine and asparagine, 111
Gunsalus, I. C. See *Feldman and Gunsalus*, 821
Gurin, Samuel. See *Brady and Gurin*, 589
Guthe, Karl F. See *Allen, Guthe, and Wyman*, 393
György, Paul. See *Tomarelli, Norris, Rose, and György*, 197

H

Haagen-Smit, A. J. See *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 839
Haenni, Edward O. See *Banes, Carol, and Haenni*, 557
Hamilton, Paul B., and **Ortiz, Priscilla J.** Proline and hydroxyproline: determination of the sum of their α-nitrogen, 733
Hankes, L. V., Lyman, R. L., and **Elvehjem, C. A.** Effect of niacin precursors on growth of rats fed tryptophan-low rations, 547
Hastings, R. See *Sinsheimer, Scott, and Loofbourow*, 299, 313
Hirschmann, Frieda B. See *Hirschmann and Hirschmann*, 137
Hirschmann, H., and **Hirschmann, Frieda B.** Steroid excretion in a case of adrenocortical carcinoma. V. Δ^5-Pregnenetriol-3β,17α,20α, 137
Hitchings, George H. See *Elion and Hitchings*, 511
Hofmann, Klaus, and **Axelrod, A. E.** Microbiological activity of the guanido analogues of biotin and oxybiotin, 29
Hofmann, Klaus, and **Axelrod, A. E.** See *Axelrod and Hofmann*, 23
Horner, William W., and **Mackenzie, Cosmo G.** The biological formation of sarcosine, 15

J

Jacob, Ruth. See *Mazur, Litt, and Shorr*, 485, 497
Johnson, Shirley. See *Ormsby and Johnson*, 711
Johnston, Robert B., Mycek, Mary J., and **Fruton, Joseph S.** Catalysis of transpeptidation reactions by chymotrypsin, 205

K

Kalnitsky, George. See *Gillette and Kalnitsky*, 679
Kay, Lois M. See *Schroeder, Kay, and Wells*, 221
Keighley, Geoffrey. See *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 839
Kelley, Barbara, Totter, John R., and **Day, Paul L.** The lipotropic effect of folic acid on rats receiving various purified diets, 529
Klemperer, Friedrich W. The effect of beryllium on certain enzymes, 189
Knapp, Doris W. See *French and Knapp*, 463
Knox, W. Eugene, and **Mehler, Alan H.** The conversion of tryptophan to kynurenine in liver. I. The coupled tryptophan peroxidase-oxidase system forming formylkynurenine, 419
—. See *Mehler and Knox*, 431
Korkes, Seymour, del Campillo, Alice, and **Ochoa, Severo.** Biosynthesis of dicarboxylic acids by carbon dioxide fixation. IV. Isolation and properties of an adaptive "malic" enzyme from *Lactobacillus arabinosus*, 891
—. See *Blanchard, Korkes, del Campillo, and Ochoa*, 875
Kun, Ernest. Inhibition of succinic dehydrogenase by methylglyoxal, 289

XUM

L

Lafaye, Jean M. See *Sakami*, 369
—. See *Sakami and Welch*, 379
Landua, Alton J. See *Awapara, Landua, Fuerst, and Seale*, 35
Lardy, Henry A., Wiebelhaus, Virgil D., and **Mann, Kingsley M.** The mechanism by which glyceraldehyde inhibits glycolysis, 325
—. See *Mann and Lardy*, 339
Lerner, Aaron Bunsen, Fitzpatrick, Thomas B., Calkins, Evan, and **Summerson, William H.** Mammalian tyrosinase: the relationship of copper to enzymatic activity, 793
Lewis, Howard B. See *Tyner, Lewis, and Eckstein*, 651
Liener, I. E., and **Schultze, M. O.** Liver arginase activity as related to blood urea in acute uremia of newborn rats, 743
Lipmann, Fritz. See *Chantrenne and Lipmann*, 757
Litt, Irene. See *Mazur, Litt, and Shorr*, 473, 485, 497
Litwack, Gerald, Williams, J. N., Jr., Feigelson, Philip, and **Elvehjem, C. A.** Xanthine oxidase and liver nitrogen variation with dietary protein, 605
Loofbourow, J. R. See *Sinsheimer, Scott, and Loofbourow*, 299, 313
Lowy, Peter H. See *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 839
Lyman, R. L. See *Hankes, Lyman, and Elvehjem*, 547

M

Mackenzie, Cosmo G. See *Horner and Mackenzie*, 15
Main, Edna R. See *Neuman, Neuman, Main, O'Leary, and Smith*, 655
Mann, Kingsley M., and **Lardy, Henry A.** Phosphoric esters of biological importance. V. The synthesis of L-sorbose-1-phosphate and L-sorbose-6-phosphate, 339
—. See *Lardy, Wiebelhaus, and Mann*, 325
Mason, M. F., and **Solow, R.** Manometric determination of methanol in the presence of ethanol in blood, 831
Mazur, Abraham, Litt, Irene, and **Shorr, Ephraim.** Chemical properties of ferritin and their relation to its vasodepressor activity, 473
—, —, and —. Oxidation and reduction of ferritin sulfhydryl-disulfide groups by liver, 497
—, —, and —. The relation of sulfhydryl groups in ferritin to its vasodepressor activity, 485
McLean, Dorothy J., and **Giese, Arthur C.** Absorption spectra of proteins and amino acids after ultraviolet irradiation, 537
— and —. Tests for hydrolysis of peptide bonds by ultraviolet light, 543
Mehler, Alan H., and **Knox, W. Eugene.** The conversion of tryptophan to kynurenine in liver. II. The enzymatic hydrolysis of formylkynurenine, 431
—. See *Knox and Mehler*, 419
Meister, Alton, and **Tice, Sarah V.** Transamination from glutamine to α-keto acids, 173
Milhorat, Ade T. See *Rosenkrantz and Milhorat*, 83
Moss, James. See *Schroeder, Kay, and Wells*, 221
Mycek, Mary J. See *Johnston, Mycek, and Fruton*, 205

N

Nakada, Henry I., and **Weinhouse, Sidney.** Oxidation of aspartic acid by rat liver, 663
Nelson, Don H. See *Reich, Nelson, and Zaffaroni*, 411
Neuman, M. W. See *Neuman, Neuman, Main, O'Leary, and Smith*, 655
Neuman, W. F., Neuman, M. W., Main, Edna R., O'Leary, J., and **Smith, F. A.** The surface chemistry of bone. II. Fluoride deposition, 655

Neurath, Hans. See *Snoke and Neurath,* 127
Norris, R. F. See *Tomarelli, Norris, Rose, and György,* 197
Novack, L., and **Brodie, Bernard B.** Quinoline and its transformation products found in urine, 787

O

Ochoa, Severo, Veiga Salles, Joao Baptista, and **Ortiz, Priscilla J.** Biosynthesis of dicarboxylic acids by carbon dioxide fixation. III. Enzymatic synthesis of *l*-malic acid by reductive carboxylation of pyruvic acid, 863
—. See *Blanchard, Korkes, del Campillo, and Ochoa,* 875
—. See *Korkes, del Campillo, and Ochoa,* 891
—. See *Veiga Salles and Ochoa,* 849
O'Leary, J. See *Neuman, Neuman, Main, O'Leary, and Smith,* 655
Oleson, J. J. See *Van Meter and Oleson,* 91
Ormsby, Andrew A., and **Johnson, Shirley.** A colorimetric method for the determination of methylamine in urine, 711
Ortiz, Priscilla J. See *Hamilton and Ortiz,* 733
—. See *Ochoa, Veiga Salles, and Ortiz,* 863

P

Payne, R. W., Raben, M. S., and **Astwood, E. B.** Extraction and purification of corticotropin, 719
Polis, B. David, Shmukler, H. W., and **Custer, J. H.** Isolation of a crystalline albumin from milk, 349
Powell, Richard E. See *Fraser and Powell,* 803
Probst, G. W., and **Schultze, M. O.** Identification of L-ascorbic acid in the urine of normal and chloretone-treated rats, 453
Proctor, Bernard E. See *Goldblith and Proctor,* 705

R

Raben, M. S. See *Payne, Raben, and Astwood,* 719
Reich, Hans, Nelson, Don H., and **Zaffaroni, Alejandro.** Isolation of 17-hydroxycorticosterone from blood obtained from adrenal veins of dogs, 411
Roberts, Eugene, and **Frankel, Sam.** γ-Aminobutyric acid in brain: its formation from glutamic acid, 55
Robertson, William van B. Concentration of collagen in guinea pig tissues in acute and prolonged scurvy, 673
Rose, C. S. See *Tomarelli, Norris, Rose, and György,* 197
Rose, William C., and **Smith, Leonard C.** Rôle of alimentary microorganisms in the synthesis of non-essential amino acids, 687
—. See *Wretlind and Rose,* 697
Rosenkrantz, Harris, and **Milhorat, Ade T.** Infra-red absorption spectra of tocopherols and some of their chemical products, 83

S

Sakami, Warwick. Formation of formate and labile methyl groups from acetone in the intact rat, 369
—, and **Welch, Arnold D.** Synthesis of labile methyl groups by the rat *in vivo* and *in vitro,* 379
Sayers, George. See *Smith, Brown, Ghosh, and Sayers,* 631
Schayer, Richard W. Studies of the metabolism of tryptophan labeled with N^{15} in the indole ring, 777
Schoenbach, Emanuel B. See *Weissman, Schoenbach, and Armistead,* 153
Schroeder, W. A., Kay, Lois M., and **Wells, Ibert C.** Amino acid composition of hemoglobins of normal Negroes and sickle-cell anemics, 221
Schultze, M. O. See *Probst and Schultze,* 453
—. See *Liener and Schultze,* 743

Scott, J. F. See *Sinsheimer, Scott, and Loofbourow*, 299, 313
Seale, Billie. See *Awapara, Landua, Fuerst, and Seale*, 35
Seip, Muriel. See *Evans*, 273
Severinghaus, J. W., and **Ferrebee, J. W.** Calcium determination by flame photometry; methods for serum, urine, and other fluids, 621
Shmukler, H. W See *Polis, Shmukler, and Custer*, 349
Shorr, Ephraim. See *Mazur, Litt, and Shorr*, 473, 485, 497
Simmonds, Sofia. See *Taylor, Simmonds, and Fruton*, 613
Singer, Thomas P. See *Englard and Singer*, 213
Sinsheimer, R. L., Scott, J. F., and **Loofbourow, J. R.** Ultraviolet absorption spectra at reduced temperatures. I. Principles and methods, 299
—, —, and —. II. Pyrimidines and purines, 313
Smith, Emil L., Brown, Douglas M., Ghosh, B. N., and **Sayers, George.** Physical studies on the adrenocorticotropic hormone of the swine adenohypophysis, 631
—. See *Dunn and Smith*, 385
Smith, F. A. See *Neuman, Neuman, Main, O'Leary, and Smith*, 655
Smith, Leonard C. *See Rose and Smith*, 687
Snoke, John E., and **Neurath, Hans.** The proteolytic activity of striated rabbit muscle, 127
Solow, R. See *Mason and Solow*, 831
Sperry, Warren M., and **Webb, Merrill.** The effect of increasing age on serum cholesterol concentration, 107
— and —. A revision of the Schoenheimer-Sperry method for cholesterol determination, 97
Stetten, DeWitt, Jr. See *Stetten and Stetten*, 241
Stetten, Marjorie R., and **Stetten, DeWitt, Jr.** The metabolism of gluconic acid, 241
Stevens, Henry. See *Coulson and Stevens*, 355
Strisower, E. H. See *Feller, Strisower, and Chaikoff*, 571
Summerson, William H. See *Lerner, Fitzpatrick, Calkins, and Summerson*, 793
Swanson, Marjorie A., and **Artom, Camillo.** The lipide composition of the large granules (mitochondria) from rat liver, 281

T

Taylor, Sterling P., Jr., Simmonds, Sofia, and **Fruton, Joseph S.** Utilization of methionine derivatives by a mutant strain of *Escherichia coli*, 613
Tice, Sarah V. See *Meister and Tice*, 173
Tomarelli, Rudolph M., Norris, R. F., Rose, C. S., and **György, Paul.** The effect of fatty acids on the growth of strains of *Lactobacillus bifidus*, 197
Totter, John R. See *Kelley, Totter, and Day*, 529
Tyner, Evelyn Pease, Lewis, Howard B., and **Eckstein, H. C.** Niacin and the ability of cystine to augment deposition of liver fat, 651

U

Udenfriend, Sidney. Identification of γ-aminobutyric acid in brain by the isotope derivative method, 65

V

Van Meter, J. C., and **Oleson, J. J.** A modified method of estimation of xanthine oxidase in tissue homogenates, 91
Veiga Salles, Joao Baptista, and **Ochoa, Severo.** Biosynthesis of dicarboxylic acids by carbon dioxide fixation. II. Further study of the properties of the "malic" enzyme of pigeon liver, 849
—. See *Ochoa, Veiga Salles, and Ortiz*, 863

Vollmer, E. See *Sinsheimer, Scott, and Loofbourow*, 299, 313

W

Waelsch, Heinrich. See *Grossowicz, Wainfan, Borek, and Waelsch*, 111

Wainfan, Elsie. See *Grossowicz, Wainfan, Borek, and Waelsch*, 111

Walaas, Eva. See *Walaas and Walaas*, 769

Walaas, Otto, and **Walaas, Eva.** Effect of epinephrine on rat diaphragm, 769

Webb, Merrill. See *Sperry and Webb*, 97, 107

Weinhouse, Sidney. See *Nakada and Weinhouse*, 663

Weinman, E. O., Chaikoff, I. L., Entenman, C., and **Dauben, W. G.** Turnover rates of phosphate and fatty acid moieties of plasma phospholipides, 643

Weissman, Norman, Schoenbach, Emanuel B., and **Armistead, Eleanor B.** The determination of sulfhydryl groups in serum. I. Methods and results on normal sera, 153

Welch, Arnold D. See *Sakami and Welch*, 379

Wells, Ibert C. See *Schroeder, Kay, and Wells*, 221

Westergaard, M. See *Sinsheimer, Scott, and Loofbourow*, 299, 313

Wiebelhaus, Virgil D. See *Lardy, Wiebelhaus, and Mann*, 325

Williams, J. N., Jr. The effects of folic acid and aminopterin upon enzyme systems *in vitro*, 47

—, **Feigelson, Philip,** and **Elvehjem, C. A.** Relation of tryptophan and niacin to pyridine nucleotides of tissue, 597

—. See *Litwack, Williams, Feigelson, and Elvehjem*, 605

Wingo, William J., and **Awapara, Jorge.** Decarboxylation of L-glutamic acid by brain, 267

Wretlind, K. Arvid J., and **Rose, William C.** Methionine requirement for growth and utilization of its optical isomers, 697

Wyman, Jeffries, Jr. See *Allen, Guthe, and Wyman*, 393

Z

Zaffaroni, Alejandro. See *Reich, Nelson, and Zaffaroni*, 411

Zamenhof, Stephen, and **Chargaff, Erwin.** Dissymmetry in nucleotide sequence of desoxypentose nucleic acids, 1

XUM

INDEX TO SUBJECTS

A

Acetate: Fluoro-. *See* Fluoroacetate

Acetone: Formate formation from, *in vivo*, *Sakami*, 369

Methyl groups, labile, formation from, *in vivo*, *Sakami*, 369

Acetyl: Pyruvate-formate exchange system, donor, *Chantrenne and Lipmann*, 757

Adenohypophysis: Adrenocorticotropic hormone, physical studies, *Smith, Brown, Ghosh, and Sayers*, 631

Adrenal(s): Blood, 17-hydroxycorticosterone isolation, *Reich, Nelson, and Zaffaroni*, 411

Adrenalin: *See also* Epinephrine

Adrenocortical carcinoma: Δ^5-Pregnenetriol-3β,17α,20α excretion, *Hirschmann and Hirschmann*, 137

Steroid excretion, *Hirschmann and Hirschmann*, 137

Adrenocorticotropic hormone: Adenohypophysis, physical studies, *Smith, Brown, Ghosh, and Sayers*, 631

Age: Blood serum cholesterol, effect, *Sperry and Webb*, 107

Alanine: D-, acetylation reaction *in vivo*, use, *Anker*, 167

L-, acetylation reaction *in vivo*, use, *Anker*, 167

Phenyl-. *See* Phenylalanine

Albumin: Crystalline, milk, isolation, *Polis, Shmukler, and Custer*, 349

Whey and blood serum, relation, *Coulson and Stevens*, 355

Alloxan: Diabetes, glucose turnover and oxidation, *Feller, Strisower, and Chaikoff*, 571

Amine: Methyl-. *See* Methylamine

Amino acid(s): Absorption spectra, ultraviolet irradiation, *McLean and Giese*, 537

D-, lactic acid bacteria, utilization, *Camien and Dunn*, 365

Derivatives, bacterial metabolism, *Eades*, 147

Amino acid(s)—*continued:*

Free, muscle, growth effect, *Bartlett and Glynn*, 253

Hemoglobin, sickle-cell anemia, *Schroeder, Kay, and Wells*, 221

Non-essential, synthesis, alimentary microorganisms, rôle, *Rose and Smith*, 687

Unnatural, derivatives, carboxypeptidase action, *Dunn and Smith*, 385

Aminobutyric acid: γ-, brain, formation from glutamic acid, *Roberts and Frankel*, 55

—, —, identification, isotope use, *Udenfriend*, 65

—, free, brain, *Awapara, Landua, Fuerst, and Seale*, 35

Aminopterin: Enzyme systems *in vitro*, effect, *Williams*, 47

Aminopurine: 2-, nucleic acid derivatives, antagonists, *Elion and Hitchings*, 511

Amylase: β-, physicochemistry, *Englard and Singer*, 213

Anemia: Sickle-cell, hemoglobin amino acids, *Schroeder, Kay, and Wells*, 221

Arginase: Liver, blood urea in uremia, relation, *Liener and Schultze*, 743

Ascorbic acid: L-, urine, chloretone-treated rats, identification, *Probst and Schultze*, 453

Asparagine: Hydroxamic acid formation from, enzymatic, *Grossowicz, Wainfan, Borek, and Waelsch*, 111

Aspartic acid: Liver, oxidation, *Nakada and Weinhouse*, 663

B

Bacillus: *See also Lactobacillus*

Bacteria: Lactic acid, D-amino acid utilization, *Camien and Dunn*, 365

— —, D-methionine utilization, DL-methionine sulfoxide and oxidized

Bacteria—*continued:*
casein, effect, *Camien and Dunn*, 365
Leucine derivatives, metabolism, *Eades*, 147
Metabolism, amino acid derivatives, *Eades*, 147
Phenylalanine derivatives, metabolism, *Eades*, 147
Transaminases, *Feldman and Gunsalus*, 821
Tryptophan derivatives, metabolism, *Eades*, 147
Valine derivatives, metabolism, *Eades*, 147
See also Clostridium, Escherichia, Microorganisms
Beryllium: Enzymes, effect, *Klemperer*, 189
Biotin: Guanido analogues, microbiological activity, *Hofmann and Axelrod*, 29
Hydrochloric acid effect, *Axelrod and Hofmann*, 23
Lactobacillus arabinosus metabolism, effect, *Blanchard, Korkes, del Campillo, and Ochoa*, 875
Oxy-. *See* Oxybiotin
Blood: Methanol, determination, manometric, ethanol presence, *Mason and Solow*, 831
Thiocyanate, determination, colorimetric, *Goldstein*, 523
Urea, uremia, liver arginase, relation, *Liener and Schultze*, 743
Blood cell: *See also* Polycythemia
Blood plasma: Phospholipides, phosphate and fatty acid turnover, *Weinman, Chaikoff, Entenman, and Dauben*, 643
Blood serum: Albumin, whey albumin, relation, *Coulson and Stevens*, 355
Calcium, determination, flame photometry, *Severinghaus and Ferrebee*, 621
Cholesterol, age effect, *Sperry and Webb*, 107
Sulfhydryl groups, determination, *Weissman, Schoenbach, and Armistead*, 153
Body fluid(s): Calcium, determination, flame photometry, *Severinghaus and Ferrebee*, 621
Bone: Chemistry, *Neuman, Neuman, Main, O'Leary, and Smith*, 655
Fluoride deposition, *Neuman, Neuman, Main, O'Leary, and Smith*, 655
Bone marrow: Pyruvate metabolism *in vitro, Evans*, 273
Brain: γ-Aminobutyric acid formation from glutamic acid, *Roberts and Frankel*, 55
— —, free, *Awapara, Landua, Fuerst, and Seale*, 35
— —, identification, isotope use, *Udenfriend*, 65
L-Glutamic acid decarboxylation, *Wingo and Awapara*, 267
Butyric acid: Amino-. *See* Aminobutyric acid

C

Calcium: Blood serum, determination, flame photometry, *Severinghaus and Ferrebee*, 621
Body fluids, determination, flame photometry, *Severinghaus and Ferrebee*, 621
Urine, determination, flame photometry, *Severinghaus and Ferrebee*, 621
Carbon: Mass 14, glycine, L-histidine, L-leucine, and L-lysine metabolism, use in study, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 839
Carbon dioxide: Fixation, dicarboxylic acid biosynthesis, *Veiga Salles and Ochoa*, 849
Ochoa, Veiga Salles, and Ortiz, 863
Korkes, del Campillo, and Ochoa, 891
Carboxylic acid(s): Di-. *See* Dicarboxylic acid
Carboxypeptidase: Amino acids, unnatural derivatives, action, *Dunn and Smith*, 385

Carcinoma: Adrenocortical, Δ^5-pregnenetriol-3β,17α,20α excretion, *Hirschmann and Hirschmann*, 137
—, steroid excretion, *Hirschmann and Hirschmann*, 137
Casein: Oxidized, D-methionine utilization by lactic acid bacteria, effect, *Camien and Dunn*, 365
Catalase: Determination, photometric, *Goldblith and Proctor*, 705
Cell: *See also* Mitochondria
Chloretone: Urine L-ascorbic acid, identification, effect, *Probst and Schultze*, 453
Cholesterol: Blood serum, age effect, *Sperry and Webb*, 107
Determination, Schoenheimer-Sperry, revision, *Sperry and Webb*, 97
Labeled, synthesis, diabetes, *Brady and Gurin*, 589
Chymotrypsin: Transpeptidation reactions, catalysis, *Johnston, Mycek, and Fruton*, 205
Clostridium acetobutylicum: Maltase, specificity and action, *French and Knapp*, 463
Cobalt: Polycythemia, *Berlin*, 41
Coenzyme: A, pyruvate-formate exchange system, effect, *Chantrenne and Lipmann*, 757
Collagen: Tissue, scurvy, *Robertson*, 673
Compound 3: Identification, *Banes, Carol, and Haenni*, 557
Copper: Tyrosinase, effect, *Lerner, Fitzpatrick, Calkins, and Summerson*, 793
Corticosterone: 17-Hydroxy-. *See* Hydroxycorticosterone
Corticotropin: Extraction and purification, *Payne, Raben, and Astwood*, 719
Cystine: Homo-. *See* Homocystine
Liver fat, niacin and, effect, *Tyner, Lewis, and Eckstein*, 651

D

Dehydrogenase: Succinic. *See* Succinic dehydrogenase
Desoxypentose: Nucleic acids, nucleotide sequence, dissymmetry, *Zamenhof and Chargaff*, 1
Diabetes: Alloxan, glucose turnover and oxidation, *Feller, Strisower, and Chaikoff*, 571
Labeled fatty acids and cholesterol, synthesis, *Brady and Gurin*, 589
Diaminopurine: 2,6-, nucleic acid derivatives, antagonists, *Elion and Hitchings*, 511
Diaphragm: Epinephrine effect, *Walaas and Walaas*, 769
Dicarboxylic acid(s): Synthesis, carbon dioxide fixation, *Veiga Salles and Ochoa*, 849
Ochoa, Veiga Salles, and Ortiz, 863
Korkes, del Campillo, and Ochoa, 891

E

Enzyme(s): Beryllium effect, *Klemperer*, 189
Formylkynurenine hydrolysis, *Mehler and Knox*, 431
Hydroxamic acid formation from glutamine and asparagine, effect, *Grossowicz, Wainfan, Borek, and Waelsch*, 111
Malic, *Lactobacillus arabinosus*, isolation and properties, *Korkes, del Campillo, and Ochoa*, 891
—, liver, properties, *Veiga Salles and Ochoa*, 849
l-Malic acid synthesis by pyruvic acid carboxylation, *Ochoa, Veiga Salles, and Ortiz*, 863
Systems, *in vitro*, folic acid and aminopterin effect, *Williams*, 47
See also Amylase, Arginase, etc.
Epinephrine: Diaphragm, effect, *Walaas and Walaas*, 769
Equilin: Iso-. *See* Isoequilin
Escherichia coli: Mutant strain, methionine derivatives, utilization, *Taylor, Simmonds, and Fruton*, 613
Ethanol: Blood methanol determination, manometric, in presence, *Mason and Solow*, 831

F

Fat: Liver, niacin and cystine, effect, *Tyner, Lewis, and Eckstein*, 651

Fatty acid(s): Labeled, synthesis, diabetes, *Brady and Gurin*, 589

Lactobacillus bifidus growth, effect, *Tomarelli, Norris, Rose, and György*, 197

Liver, oxidation, fluoroacetate effect, *Gillette and Kalnitsky*, 679

Turnover, blood plasma phospholipides, *Weinman, Chaikoff, Entenman, and Dauben*, 643

Ferritin: Sulfhydryl groups, vasodepressor activity, relation, *Mazur, Litt, and Shorr*, 485

Sulfhydryl-disulfide groups, oxidation and reduction, liver, *Mazur, Litt, and Shorr*, 497

Vasodepressor activity, relation and chemical properties, *Mazur, Litt, and Shorr*, 473

Fluoride: Bone, deposition, *Neuman, Neuman, Main, O'Leary, and Smith*, 655

Fluoroacetate: Liver fatty acid oxidation, effect, *Gillette and Kalnitsky*, 679

Folic acid: Enzyme systems *in vitro*, effect, *Williams*, 47

Growth with homocystine, effect, *Bennett*, 751

Lipotropic effect, *Kelley, Totter, and Day*, 529

Formate: Formation from acetone *in vivo, Sakami*, 369

Pyruvate-, exchange system, coenzyme A dependence and acetyl donor function, *Chantrenne and Lipmann*, 757

Formylkynurenine: Hydrolysis, enzymatic, *Mehler and Knox*, 431

Tryptophan peroxidase-oxidase system, *Knox and Mehler*, 419

G

Gluconic acid: Metabolism, *Stetten and Stetten*, 241

Glucose: Alloxan diabetes, turnover and oxidation, *Feller, Strisower, and Chaikoff*, 571

Glutamic acid: γ-Aminobutyric acid formation from, brain, *Roberts and Frankel*, 55

L-, decarboxylation, brain, *Wingo and Awapara*, 267

Glutamine: Hydroxamic acid formation from, enzymatic, *Grossowicz, Wainfan, Borek, and Waelsch*, 111

Muscle, growth effect, *Bartlett and Glynn*, 253

Transamination to α-keto acids, *Meister and Tice*, 173

Glyceraldehyde: Glycolysis inhibition, mechanism, *Lardy, Wiebelhaus, and Mann*, 325

Glycine: Carbon^{14}-labeled, metabolism, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 839

Glycolysis: Glyceraldehyde effect, mechanism, *Lardy, Wiebelhaus, and Mann*, 325

Glyoxal: Methyl-. *See* Methylglyoxal

Growth: Free amino acids, effect, *Bartlett and Glynn*, 253

Glutamine, effect, *Bartlett and Glynn*, 253

Homocystine with vitamin B_{12} and folic acid, effect, *Bennett*, 751

Liver and kidney transaminase, effect, *Bartlett and Glynn*, 261

Methionine effect, *Wretlind and Rose*, 697

Muscle transaminase, effect, *Bartlett and Glynn*, 253

Niacin precursors, tryptophan-low rations, effect, *Hankes, Lyman, and Elvehjem*, 547

H

Hemoglobin: Amino acids, sickle-cell anemia, *Schroeder, Kay, and Wells*, 221

Oxygen equilibrium, *Allen, Guthe, and Wyman*, 393

Histidine: L-, C^{14}-labeled, metabolism, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy*, 839

Homocystine: Growth, vitamin B_{12} and folic acid with, effect, *Bennett*, 751

Hydroxamic acid(s): Formation from glutamine and asparagine, enzymatic, *Grossowicz, Wainfan, Borek, and Waelsch,* 111
Hydroxycorticosterone: 17-, adrenal vein, isolation, *Reich, Nelson, and Zaffaroni,* 411
Hydroxyproline: α-Nitrogen, determination, *Hamilton and Ortiz,* 733
Hypophysis: *See also* Adenohypophysis

I

Isoequilin: A, resolution, *Banes, Carol, and Haenni,* 557

K

Keto acid(s): α-, transamination from glutamine, *Meister and Tice,* 173
Kidney: Transaminase, growth effect, *Bartlett and Glynn,* 261
Kynurenine: Formyl-. *See* Formylkynurenine
Tryptophan conversion to, liver, *Knox and Mehler,* 419
Mehler and Knox, 431

L

Lactic acid: Bacteria, D-amino acid utilization, *Camien and Dunn,* 365
—, D-methionine utilization, DL-methionine sulfoxide and oxidized casein, effect, *Camien and Dunn,* 365
Lactobacillus arabinosus: Malic enzyme, isolation and properties, *Korkes, del Campillo, and Ochoa,* 891
Metabolism, biotin effect, *Blanchard, Korkes, del Campillo, and Ochoa,* 875
Lactobacillus bifidus: Growth, fatty acid effect, *Tomarelli, Norris, Rose, and György,* 197
Leucine: Derivatives, bacterial metabolism, *Eades,* 147
Isopropyl group, metabolic fate, *Coon,* 71
L-, C^{14}-labeled, metabolism, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy,* 839
Lipide(s): Liver mitochondria, *Swanson and Artom,* 281
Phospho-. *See* Phospholipides
Lipotropic effect: Folic acid, *Kelley, Totter, and Day,* 529
Liver: Arginase, blood urea in uremia, relation, *Liener and Schultze,* 743
Aspartic acid oxidation, *Nakada and Weinhouse,* 663
Fat, niacin and cystine, effect, *Tyner, Lewis, and Eckstein,* 651
Fatty acid oxidation, fluoroacetate effect, *Gillette and Kalnitsky,* 679
Ferritin sulfhydryl-disulfide groups, oxidation and reduction, *Mazur, Litt, and Shorr,* 497
Malic enzyme, properties, *Veiga Salles and Ochoa,* 849
Mitochondria, lipides, *Swanson and Artom,* 281
Nitrogen, dietary protein, effect, *Litwack, Williams, Feigelson, and Elvehjem,* 605
Transaminase, growth effect, *Bartlett and Glynn,* 261
Tryptophan conversion to kynurenine, *Knox and Mehler,* 419
Mehler and Knox, 431
Xanthine oxidase, dietary protein, effect, *Litwack, Williams, Feigelson, and Elvehjem,* 605
Lysine: L-, C^{14}-labeled, metabolism, *Borsook, Deasy, Haagen-Smit, Keighley, and Lowy,* 839

M

Malic acid: *l*-, synthesis, enzymatic, by pyruvic acid carboxylation, *Ochoa, Veiga Salles, and Ortiz,* 863
Malic enzyme: *Lactobacillus arabinosus,* isolation and properties, *Korkes, del Campillo, and Ochoa,* 891
Liver, properties, *Veiga Salles and Ochoa,* 849
Maltase: *Clostridium acetobutylicum,* specificity and action, *French and Knapp,* 463
Methanol: Blood, determination, manometric, ethanol presence, *Mason and Solow,* 831

Methionine: D-, lactic acid bacteria, utilization, DL-methionine sulfone and oxidized casein effect, *Camien and Dunn*, 365
Derivatives, *Escherichia coli* mutant strain, utilization, *Taylor, Simmonds, and Fruton*, 613
Growth, effect, *Wretlind and Rose*, 697
Methionine sulfone: DL-, D-methionine utilization by lactic acid bacteria, effect, *Camien and Dunn*, 365
Methylamine: Urine, determination, colorimetric, *Ormsby and Johnson*, 711
Methylglyoxal: Succinic dehydrogenase, effect, *Kun*, 289
Methyl group(s): Labile, formation from acetone *in vivo*, *Sakami*, 369
—, synthesis, *in vivo* and *in vitro*, *Sakami and Welch*, 379
Microorganism(s): Alimentary, nonessential amino acid synthesis, rôle, *Rose and Smith*, 687
Milk: Albumin, crystalline, isolation, *Polis, Shmukler, and Custer*, 349
Mitochondria: Liver, lipides, *Swanson and Artom*, 281
Muscle: Amino acids, free, growth effect, *Bartlett and Glynn*, 253
Glutamine, growth effect, *Bartlett and Glynn*, 253
Proteolytic activity, *Snoke and Neurath*, 127
Transaminase, growth effect, *Bartlett and Glynn*, 253

N

Niacin: Liver fat, cystine and, effect, *Tyner, Lewis, and Eckstein*, 651
Precursors, growth, tryptophan-low rations, effect, *Hankes, Lyman, and Elvehjem*, 547
Tissue pyridine nucleotide, relation, *Williams, Feigelson, and Elvehjem*, 597
Nitrogen: α-, proline and hydroxyproline, determination, *Hamilton and Ortiz*, 733
Nitrogen—*continued:*
Liver, dietary protein, effect, *Litwack, Williams, Feigelson, and Elvehjem*, 605
Mass 15, tryptophan labeled with, metabolism, *Schayer*, 777
Storage, mechanism, *Bartlett and Glynn*, 253, 261
Nucleic acid(s): Derivatives, 2-aminopurine and 2,6-diaminopurine as antagonists, *Elion and Hitchings*, 511
—, antagonists, *Elion and Hitchings*, 511
Desoxypentose, nucleotide sequence, dissymmetry, *Zamenhof and Chargaff*, 1
Nucleotide: Pyridine, tissue tryptophan and niacin, relation, *Williams, Feigelson, and Elvehjem*, 597

O

Oxidase: Peroxidase-, system, tryptophan, forming formylkynurenine, *Knox and Mehler*, 419
Xanthine. *See* Xanthine oxidase
Oxybiotin: Guanido analogues, microbiological activity, *Hofmann and Axelrod*, 29
Oxygen: Equilibrium, hemoglobin, *Allen, Guthe, and Wyman*, 393

P

Peptidase: Carboxy-. *See* Carboxypeptidase
Peptide(s): Bonds, hydrolysis, ultraviolet light in test, *McLean and Giese*, 543
Peroxidase: -Oxidase system, tryptophan, forming formylkynurenine, *Knox and Mehler*, 419
Phenylalanine: Derivatives, bacterial metabolism, *Eades*, 147
Phosphate: Turnover, blood plasma phospholipides, *Weinman, Chaikoff, Entenman, and Dauben*, 643
Phospholipide(s): Blood plasma, phosphate and fatty acid turnover, *Weinman, Chaikoff, Entenman, and Dauben*, 643

Phosphoric ester(s): Biological, *Mann and Lardy*, 339
Polycythemia: Cobalt, *Berlin*, 41
Pregnenetriol-3β,17α,20α: Δ^5-, excretion, adrenocortical carcinoma, *Hirschmann and Hirschmann*, 137
Proline: Hydroxy-. *See* Hydroxyproline
α-Nitrogen, determination, *Hamilton and Ortiz*, 733
Protein(s): Absorption spectra, ultraviolet irradiation, *McLean and Giese*, 537
Dietary, liver xanthine oxidase and nitrogen, effect, *Litwack, Williams, Feigelson, and Elvehjem*, 605
Proteolysis: Muscle, *Snoke and Neurath*, 127
Purine(s): Amino-. *See* Aminopurine
Diamino-. *See* Diaminopurine
Ultraviolet absorption spectra, reduced temperatures, *Sinsheimer, Scott, and Loofbourow*, 313
Pyridine nucleotide: Tissue, tryptophan and niacin relation, *Williams, Feigelson, and Elvehjem*, 597
Pyrimidine(s): Ultraviolet absorption spectra, reduced temperatures, *Sinsheimer, Scott, and Loofbourow*, 313
Pyruvate: -Formate exchange system, coenzyme A dependence and acetyl donor function, *Chantrenne and Lipmann*, 757
Metabolism, bone marrow, *in vitro*, *Evans*, 273
Pyruvic acid: Carboxylation, *l*-malic acid synthesis, enzymatic, *Ochoa, Veiga Salles, and Ortiz*, 863

Q

Quinoline: Transformation products, urine, *Novack and Brodie*, 787
Urine, *Novack and Brodie*, 787

S

Sarcosine: Formation, biological, *Horner and Mackenzie*, 15
Scurvy: Tissue collagen, *Robertson*, 673
Sorbose-1-phosphate: L-, synthesis, *Mann and Lardy*, 339
Sorbose-6-phosphate: L-, synthesis, *Mann and Lardy*, 339
Steroid(s): Adrenocortical carcinoma, *Hirschmann and Hirschmann*, 137
Succinic dehydrogenase: Methylglyoxal effect, *Kun*, 289
Sulfhydryl groups: Blood serum, determination, *Weissman, Schoenbach, and Armistead*, 153
Ferritin, vasodepressor activity, relation, *Mazur, Litt, and Shorr*, 485

T

Thiocyanate: Blood, determination, colorimetric, *Goldstein*, 523
Tissue(s): Transamination, *Cammarata and Cohen*, 439
Tocopherol(s): Absorption spectra, infra-red, *Rosenkrantz and Milhorat*, 83
Transaminase(s): Bacteria, *Feldman and Gunsalus*, 821
Liver and kidney, growth effect, *Bartlett and Glynn*, 261
Muscle, growth effect, *Bartlett and Glynn*, 253
Transamination: Glutamine to α-keto acids, *Meister and Tice*, 173
Tissues, *Cammarata and Cohen*, 439
Trypsin: Chymo-. *See* Chymotrypsin
Digestion, kinetics, *Fraser and Powell*, 803
Tryptophan: Derivatives, bacterial metabolism, *Eades*, 147
Kynurenine conversion from liver, *Knox and Mehler*, 419
Mehler and Knox, 431
-Low rations, growth, niacin precursors, effect, *Hankes, Lyman, and Elvehjem*, 547
Nitrogen^{15}-labeled in indole ring, metabolism, *Schayer*, 777
Peroxidase-oxidase system, forming formylkynurenine, *Knox and Mehler*, 419

Tryptophan—*continued:*
Tissue pyridine nucleotide, relation, *Williams, Feigelson, and Elvehjem,* 597
Tyrosinase: Copper effect, *Lerner, Fitzpatrick, Calkins, and Summerson,* 793

U

Ultraviolet absorption: Spectra, reduced temperatures, *Sinsheimer, Scott, and Loofbourow,* 299, 313
Ultraviolet light: Peptide bond hydrolysis, use in test, *McLean and Giese,* 543
Urea: Blood, uremia, liver arginase, relation, *Liener and Schultze,* 743
Uremia: Blood urea and liver arginase, relation, *Liener and Schultze,* 743
Urine: L-Ascorbic acid, chloretone-treated rats, identification, *Probst and Schultze,* 453
Calcium, determination, flame photometry, *Severinghaus and Ferrebee,* 621
Methylamine determination, colorimetric, *Ormsby and Johnson,* 711
Urine—*continued:*
Quinoline and transformation products, *Novack and Brodie,* 787

V

Valine: Derivatives, bacterial metabolism, *Eades,* 147
Vasodepressor: Activity, ferritin, chemical properties and, relation, *Mazur, Litt, and Shorr,* 473
—, — sulfhydryl groups, relation, *Mazur, Litt, and Shorr,* 485
Vitamin(s): B_{12}, growth with homocystine, effect, *Bennett,* 751

W

Whey: Albumin, blood serum albumin, relation, *Coulson and Stevens,* 355

X

Xanthine oxidase: Liver, dietary protein, effect, *Litwack, Williams, Feigelson, and Elvehjem,* 605
Tissue homogenates, determination, *Van Meter and Oleson,* 91
